Capital city: Riga
Total area: 65 000 km²
Population: 1.997 million
Currency: EUR, since 2014
Schengen area: Member of the Schengen area since 2007

Geography

LATVIA is located in North-Eastern Europe, on the east coast of the Baltic Sea. It is in the centre of the Baltic States (Estonia, Latvia and Lithuania). Latvia borders Estonia, Russia, Belarus, and Lithuania. With over 44 per cent of its territory covered by forests, a vast network of free flowing rivers and thousands of lakes, Latvia is one of Europe’s best preserved havens for a wide variety of wildlife.
Latvia is famous for its beautiful coastline and pine forests. You can see the well-known white sand beaches, and extravagant rocky beach near Tuja. Visitors to Latvia may generally experience a safe and secure country, and many of crimes could have easily been avoided using common sense practices.

History

Latvia is a country of rich history and cultural traditions and a relatively new national state. For a thousand years this land in the North-East of Europe was inhabited by the Baltic and Finno-Ugric tribes. Latvia’s geographical location between the East and West has historically made it attractive to foreign kings and conquerors. The Germans, Swedes, Poles and Russians had ruled here, each leaving their cultural imprint on the country’s architecture, infrastructure, style and personality.

The consolidation of the modern Latvian nation started in the 19th century. That was a period of national awakening that later served also as a precondition for establishment of an independent national state in the 20th century.

Today Latvia is a member country of the European Union, on its way to welfare and economic growth.

Why not to come and experience student life and vibrancy of culture life in this beautiful country?
Politics

Latvia regained independence from the Soviet Union in 1991. Latvia has been a member of the European Union since 2004 and is represented in the European Parliament. Latvia is a member of the United Nations, European Union, Council of Europe, NATO, Organisation for Security and Co-operation in Europe, International Monetary Fund and World Trade Organisation. Latvia has established diplomatic relations with 158 countries and maintains embassies in 35 countries. 37 countries maintain an embassy in Latvia’s capital Riga.

The climate and weather conditions

Latvia is located in such a geographical zone, which allows one to enjoy the magic and the differences of the four seasons, which is mostly not possible elsewhere in Europe. Therefore the climate in Latvia is mild and humid, without extreme fluctuations in temperature; however, it’s true that the weather conditions are unsettled and changeable. Nevertheless Latvia has four pronounced seasons – winter, spring, summer and autumn. The summer climate in Latvia is warm with an average temperature of 17°C, the peak occasionally going as high as 30°C. During spring and autumn weather is relatively mild but variable, generally humid with the average temperature around 10°C. Fall is popular with nature lovers due to colourful leafage. Winters in Latvia usually starts in mid-December and last till mid-March. The average temperature in winter is around – 6°C, the cold can sometimes reach even – 20°C. Latvia is a very lush green country for a good reason – it rains quite a lot. Be sure to bring a sturdy umbrella for year around use, warm clothes and sturdy, waterproof boots from September to March/April.

Language

Latvian is the official state language. Latvian belongs to the Baltic branch of the Indo-European language family. Although the official state language is Latvian, you will easily get around by using Russian and English languages.

Eating traditions

Latvia is a real paradise for gourmands – here you can enjoy a traditional meal as well as modern cuisine. Eating well is popular in Latvia and, also, as Latvia is on the crossroads between East and West, and North and South, you can observe the influence of many different national cuisines and enjoy the result
– borrowing the best from each. Meat, fish, potatoes and dairy products are the most popular components of main dish meals. Salads are more often composed of vegetables than of greens, and sour cream or mayonnaise is the preferred dressing. Latvians are still very fond of their traditional dark rye bread. One hundred percent sourdough rye bread is the traditional staple of Latvia, and it is central to Latvian culinary and cultural history price. Many people in Latvia grow their own food, thus, it can be said that ecologically clean food is widely available. Every person living in the countryside grows food for himself and city dwellers can purchase the farm-grown food in so-called green markets.

The capital city – Riga

Riga is the capital of Latvia – a political, cultural and economic centre. More than 1/3 of Latvia’s inhabitants live and work in the capital city. Riga was founded in 1201 and is among most beautiful European medieval cities, and is the largest city in the three Baltic states with a population of 695 539. Riga is well known for its fantastic integration of historic and contemporary architecture. In fact, Riga is considered by many to be the world’s best epicentre of Art Nouveau, particularly Jugendstil (German Art Nouveau). Tourists from all over the world admire the city of Riga. The elegant Old Town and distinctive Art Nouveau architecture serve as stimulating setting for a vibrant modern business and cultural life. All ages of contemporary European architecture can be seen in the streets of Riga they perfectly complement each other and crate the feeling that many things are happening simultaneously in Riga – the contemporary fashion fits very well with the medieval buildings and narrow streets. Riga
has always been the city of youth, since the majority of Latvian higher educational institutions are located here. Riga has always been the birthplace of new ideas, and students fill the streets with their energy.

**Travel to Latvia**

Latvia is easily accessible by land, sea or air, and has the largest railway terminal and international airport in the Baltics. Nineteen different airline companies serve Riga airport, including a number of budget airlines, so it should not be too difficult to find a reasonable ticket. Another way or arriving in Latvia is by ferry. International train routes are currently limited to connections with Moscow and St. Petersburg in Russia, as well as to various destinations in Ukraine. Riga is very well served by extensive bus connections. Bus routes connect Latvia with Belgium, the Netherlands, France, UK, Ireland, Norway, Sweden, Germany, the Czech Republic, Russia, Ukraine and Belarus and many other European countries. Check with your local travel agency or transport provider to learn more about connections and prices.

**Entertainment, sports and leisure**

Latvia has a vibrant cultural life. Classical and modern music and dance performances are of high quality. Folk music and dance traditions are alive and play a large role in everyday life. Riga as a regional centre and Latvia’s capital city can offer a wide range of cultural events and entertainment, from bustling nightlife to world-class performances of classical music and ballet, art galleries and leisure activities. Those interested in ‘high arts’ – opera and ballet will get a real treat from a visit to the Latvian National Opera (LNO). All those, who are attracted by visual arts, should visit museums and the numerous art galleries accommodated in the Old Town and the city centre.

In some ways Riga is a city that never sleeps. At any time, day or night, you can find a place to sit back and refuel, and the choice and variety of such places is growing rapidly day by day.

High-quality entertainment and art enjoyment in an excellent, cosy atmosphere - modern cinemas offer such a conception. Films in Latvian cinemas are mostly shown in the original language and are subtitled (not dubbed) in Latvian and Russian languages. A visit to Latvia will not be a disappointment to sports fans. Ice hockey, football (soccer), tennis, car racing, motorcycle racing – all high-level events in the field of sport take place in Latvia – year round, and everybody visiting Latvia can surely go and watch. Ice hockey is certainly the most
popular sport in Latvia. Each spring, when the Latvian national team is playing in the World Championship, it is also followed by several thousand Latvian fans who have rightfully been identified as the best hockey fans in the world.

**Good to know**

**Currency**
Latvia joined the euro area on 1 January 2014. On that date the euro replaced the lats at the fixed exchange rate of €1 = LVL 0.702804.

**Driving in Latvia**
Foreign driving licenses are valid in Latvia. You must always carry your driving license when driving. Do not drink alcohol and drive! Latvia has stricter regulations than many other countries when it comes to drinking and driving. It is compulsory for both drivers and passengers of the cars and light vehicles to have their safety belts fastened when moving. In built-up areas the general limit is 50 km/h, on minor trunk roads the speed limit is 90 km/h.

**Business hours**
Shops are usually open Monday to Friday 8/10am - 6/8pm. Some have reduced working hours on Saturdays and Sundays and a few stores close on Sunday. Stores located in shopping centres usually have the same working hours throughout the week. Most food shops stay open until 10pm and are also open on Sunday. Central offices of banks are open 9am to 5pm. Several banks have neighbourhood service centres that have opening hours into the evening and on week-ends. Most shops and all banks will be closed on the following public holidays: January 1; Good Friday; Easter Day; May 1; May 4; Mothers’ Day (second Sunday in May); June 23 (Midsummer); June 24 (St John’s Day); Nov 18 (National Day); December 25 & 26; and December 31. If May 4 or November 18 fall on a weekend, the following Monday is free.

**Higher education in Latvia**
Latvia successfully participates in the establishment of the European Higher Education Area, that promotes mobility, attracts students and staff from Europe and as well as from other parts of world and is internationally competitive. Higher education institutions of Latvia are active members of international cooperation in the field of education and research. Institutions of higher education promote the development of student competitiveness in the dynamically changing socioeconomic environment in the local and international labour markets. The Latvian higher education system is part of the Bologna
process, and, correspondingly, follows the so-called 3-cycle system, where the 1st cycle includes an academic or professional Bachelor degree, the 2nd cycle includes an academic or professional Master degree and the 3rd cycle includes the Doctoral degree. Academic credits in academic and professional programmes may be transferred in order to adjust one’s education path to one’s specific needs.

The system of higher education of Latvia sets a difference between academic and professional higher education. Most of the institutions of higher education offer both academic and professional higher education degree. Academic higher education programmes are based upon fundamental and/or applied science; they usually comprise a thesis at the end of each stage and lead to a Bachelor’s degree and Master’s degree. Duration of Bachelor’s programmes may be 3 or 4 years.

Professional higher education programmes are based upon fundamental and applied science that ensures opportunities to prepare for professional activities. In total the duration of professional study programmes is not less than 4 years after secondary education and not less than 2 years after college education. The length of the first level of professional higher education or college education (2-3 years); second level of professional higher education or bachelor degree lasts 4 years but professional Master’s studies 1-2 years. Doctoral studies last 3-4 full-time years.

The HEI in Latvia offer study programmes in such fields as: Computer Science, Social Sciences, Social Welfare, Teacher Training and Education Science, Agriculture and Foster, Architecture and Civil Engineering, Arts, Business and Administration, Law, Natural Sciences, Humanities. The most popular study programmes are: Health Care, Engineering and Technologies, Mathematics and Statistics, Computer Science, Business and Administration.

### Tuition fee and scholarships

Tuition fee depends on the chosen institution and the study programme. The range is from EUR 1000 per year to 10 000 per year (e.g. Dental Surgeon’s degree programme). The precise tuition fees at HEI in Latvia can be found on www.studyinlatvia.eu.

State Education Development Agency offers scholarships to foreign students and teaching staff for studies, research work and participation in summer schools in Latvia for citizens who are from countries which have signed an Agreement or offer scholarships for Latvian students can apply for the Latvian government scholarships (www.viaa.gov.lv).
The education system of the Republic of Latvia (2014)
International opportunities

HEI offers different international opportunities for students:

• ERASMUS+ is a new programme for education, training, youth and sport activities, and it provides foreign students with opportunity to study for a semester abroad;
• Joint degree programmes – one academic year should be spent in partner university;
• Different international projects;
• Study visits – a short stay of three to five days in a host country for a group of 10 to 15 people;
• Summer schools.

Admissions

The registration of applicants and the closing dates for applications may vary in different higher education institutions. Admission for autumn semester usually starts from May and ends in August, but for spring semester- from mid-December till the end of January.

Students wishing to study in Latvia have to contact and submit their applications directly to the chosen institution. If study agreements do not provide otherwise, foreign students who meet the following requirements may be enrolled in institutions of higher education of Latvia if students have:

• corresponding level of education required for admission to the relevant study programme in the chosen institution of higher education;
• the relevant education certificate/degree that meets Latvian education standards;
• a sufficient level of proficiency in the language(s) of instruction.

Finding accommodation

Some universities have their own student dormitories; others provide assistance with housing search. You should ask the foreign student advisor at your chosen university for advice, since the housing market in Latvia is not very easy to navigate even for locals.
Arrival at the university

Upon arrival at the university, the student meets with university representatives in order to become acquainted with the programme and to receive answers to any questions. Most frequently it is the staff of the External Relations Department, or members of the student council who look after visiting students.

The wellbeing of students is important to each university, thus universities inform foreign students about university life to involve them in social activities. Latvian students have always been helpful and friendly. Most often the student councils are the ones who organise student activities and social life, and membership in these student organizations is open to foreign students as well.

Average cost of living per month.

According to the EURES (European Employment services) data on living and working conditions in Latvia, the country has a fairly low standard of living as compared to other European countries, so students from abroad can spend more on their everyday needs.

**Accommodation:** (flat renting, not shared): EUR 215-500; accommodation (room renting, shared): EUR 100-200

**Food:** EUR 200-250 (meals at the city centre: EUR 5-9 (per meal))

**Transportation per month:** EUR 11-25

**Taxi** (from the city centre to suburbs): EUR 7-15 (1 transfer); the monthly tickets for students: EUR 12.5-22 (trams, trolleybuses, buses); City public transport (one-way) ticket: EUR 1.15

**Leisure, personal needs:** EUR 100 (Cinema ticket: EUR 5-10; Opera ticket: EUR 7-42; Rock concerts: EUR 7.5-30)

Average monthly living expenses in Latvia are estimated to be between EUR 450 and 700, depending on the type of accommodation (student dorm or privately rented housing/flat). These amounts should be enough to cover food, accommodation, utilities, transportation and other expenses. To see the detailed list of expense go to studyinlatvia.eu.

Visas and residence permits

A residence permit is a document providing a foreigner the rights to reside in the Republic of Latvia for a definite period of time (a temporary residence permit) or permanently (a permanent residence permit). A residence permit is necessary if you are willing to reside in the Republic of Latvia for a period
of time exceeding 90 days within half a year counting from the first day of entrance. EU citizens can spend up to 90 days a year in Latvia without a visa if they have a valid passport or identity card. For longer periods of stay non-EU citizens, should contact the Office of Citizenship and Migration Affairs (OCMA) http://www.pmlp.gov.lv/en/. Information on OCMA website helps foreigners quickly find relevant information about visa and residence permit, i.e., what documents are required and where application forms can be obtained or documents submitted. Institutions of higher education also provide students with necessary information regarding residence permit.

Health insurance

Each student must be aware that it is mandatory to obtain health insurance for the entire planned period of stay in the Republic of Latvia. A health insurance is required to be able to receive a Residence Permit. Health insurance policy should guarantee coverage of expenses associated with health care provision in the Republic of Latvia, including expenses associated with return travel to one’s country of origin in case of serious health problems. The minimum coverage limit indicated in the policy cannot be less than EUR 43 000 over the insurance period. Citizens of the European Union Member States, Norway, Liechtenstein, Iceland or Switzerland can use the European Health Insurance Card (EHIC). This document certifies that the holder is a resident of one of the aforementioned countries and is covered by the social insurance system of this country. The card ensures the right to receive necessary or emergency health care to the same extent that it is available under the national social insurance system to the permanent residents of the country in question.

**The description of study programme:**
Tasks of the study programme: provide students with qualitative theoretical and practical knowledge in biology in line with contemporary requirements; deepen students’ understanding of the role of biology in contemporary science, national economy and public life; develop skills and competences in modern information acquisition and processing technologies.
Studies include such studying forms as lectures, seminars, project work, discussion in groups, laboratory work, etc. The programme envisages deeper theoretical and practical knowledge acquisition in biology and its sub-branches, understanding of the general regularities of the functioning and development of biological systems at all levels of life organisation as well as topical global and local problems in biology and their possible solutions.
Students learn research methodology in biology, skills of planning and carrying out laboratory, experimental, instrumental research and observation in nature.
The acquired skills meet the requirements of the following spheres: employees in research, management or organisational sphere in biology and science related state institutions or private enterprises.

#### The description of study programme:

Tasks of the programme are: provide the opportunity for the students to acquire various sub-branches of economics; develop students’ abilities of scientific analysis and their skills to resolve topical problems of contemporary economics; provide students with the opportunity to use modern technologies.

Main courses offered include: the application of special computer programmes for researching, modelling and prognosticating economic processes; the use of mathematical analysis and statistic elements to investigate and interpret economic processes; the applied communication in a foreign language; disciplines of general education: sociology, political science, psychology etc.

Students will be able: to carry out professional, innovative or research activities; to formulate and analytically describe information, problems and solutions of economics; to solve economic problems; to take responsibility and initiative when working individually or in a team.

The students will be able to evaluate the impact of their professional activity upon the environment and society and participate in the development of the fields of economics.

**The description of study programme:**

The aim of the programme is to ensure substantive studies by imparting theoretical knowledge in environmental science and in its branches and developing students’ scientific-research skills and abilities. Studies are organised in form of lectures, laboratory works, seminars, students’ independent work, research projects, group work, colloquia, tests, papers. Offered study courses include practical and theoretical courses in Geography, Environmental protection, Nature Resources, etc. It also provides information on basic standpoints, principles, structure and methodology, topical problems of Environmental Sciences.

Students in this programme acquire skills and knowledge of: planning and carrying out laboratory, experimental, instrumental research and observation in nature, critical evaluation of the acquired results, producing statistical analysis and interpretation, etc.

The graduates of this programme are usually employed in clinical and scientific laboratories, local government institutions, commercial enterprises, etc.

### The description of study programme:
Tasks of the study programme: provide deeper knowledge in courses of general biology and those related to the specificity of the respective biology sub branch; develop students’ skills in information processing in the contemporary world and using IT in natural sciences. Studies include such studying forms as lectures, seminars, project work, discussion in groups, laboratory work, etc. The programme envisages deeper acquisition of theoretical and practical knowledge in biology and its sub branches. Participating in the practical and laboratory works and producing research and summarizing its results in Master’s Theses, students, by applying various research methods, master the research methodology in biology, skills of planning and carrying out laboratory, experimental, instrumental research and observations in nature, skill of critical assessment of the gained results, producing data statistical analysis and interpretation, skill of presenting and publicly defending their research results, etc. The acquired skills promote master students’ competitiveness both in their later doctoral studies and working in education, research, environment administration or nature protection institutions.

Latvia University of Agriculture
**Established in:** 1939  
**Mission statement:** LLU aims to promote intellectual potential for rural development, encourage young people to acquire higher academic and professional education and contribute to the cultural development in Latvia

**The main directions of studies:** Agriculture, Veterinary Medicine, Food Technology, Engineering, Forest, Economics, Rural Engineering, Social Sciences, Information Technologies

**The main levels of studies:** Bachelor’s, Master’s, Doctoral studies

**Entry requirements:** 1) Bachelor’s studies require completed secondary education, Master’s studies are available to applicants holding a Bachelor’s degree and Doctoral studies – to applicants with a Master’s degree. All education diplomas have to be recognised in the country of issue. 2) English language knowledge that corresponds at least to CEFR B2, IELTS 6

**Languages of instruction:** Latvian, English

**The number of students:** Approx. 4500 (2013/2014)

**The number of academic staff:** Approx. 350 (elected) (2013/2014)

**Location:** Jelgava, Latvia

**Accommodation possibilities for students:** Students are housed in student hostel in shared rooms (2 persons). The price: EUR 120 per person/month

**Contact information:** Address: Lielā iela 2, Jelgava, LV-3001, Latvia

### The description of study programme:

The studies are organised in a form of lectures, practical works and project works. Experiments are performed in up-dated laboratories at the Faculty of Engineering using modern research methods and equipment.

Students in this programme gain the skills to defend and scientifically substantiate the taken decisions in solving engineering problems, to perform innovations in the sphere of engineering and also competences to independently operate with engineering-technical calculations and analysis of different complication and amount, perform experimental and analytical investigations in relation to the chosen sphere of work.

The graduates work in state-owned or private companies of agricultural machinery, auto transport, energy supply and machine building.

Latvia University of Agriculture
Forest Ecology and Silviculture (Master)

Subject area: Agriculture and Forestry

Awarded degree and/or qualification: Master of Forest Science

Duration/Study form: 2 years/Full time

The language of study programme: English

Fees: EUR 3820 per year

Link to the study programme: http://eng.llu.lv/?mi=599

Programme aims to prepare master level students for independent research activities and further studies in Doctoral study programmes, high qualification specialists for work in state and municipal institutions, economic self-government bodies and forestry industry related state-owned or private enterprises and advisory service. To create a specialised academic profile, students will need to specialize. Specialization begins with the choice of general and major subjects of studies and continues with the studies of choice subjects and research practice (empirical data collection). Directions of specialisation: forest ecology, silviculture, forest protection, dendrology and forest botany.

Students have an opportunity to deepen their knowledge in related field by participating in different international activities, for example NOVA – BOVA short-term mobilities, Euroforest MSc programme etc.

Career prospects and further studies: after completion graduates work at LLU or vocational secondary educational institutions, state and local government institutions, advisory service, forest-related state, municipal or private companies.

### Subject area:
Information Technologies and Computer Sciences

### Awarded degree and/or qualification:
Academic Bachelor of Natural Sciences (Computer Science)

### Duration/Study form:
3 years/Full time

### The language of study programme:
English

### Fees:
EUR 2200 per year

### Link to the study programme:
http://www.liepu.lv/en/48/computer-sciences

### The description of study programme:
The central aim of the programme is to give academic education in the field of Information and Communication Technologies.

Studies are organised in the form of lectures, seminars, practical classes and laboratory works, students' independent assignment (individually, literary studies, project development in small groups). Implementation of each course envisages integration of knowledge, skills and abilities, succession of the courses in their relation to writing the students’ research project.

During the course students fulfil tasks of the practice, set up and present term paper (second academic year) and Bachelor paper (third academic year).

Main courses are: Programming, Database Technologies, Management of Software Development Projects, Computer Architecture, Continuous Mathematics, Discrete Mathematics, Computer Science and Numerical Methods. After obtaining Bachelor’s degree the graduates have an opportunity to work at organisations performing software development, delivery, and maintenance. They also are entitled to continue their studies as Master students in Information Technology or Computer Science.

**The description of study programme:**

The goal of the “Dentistry” study programme is to prepare students to be qualified dentists whose knowledge and practical skills permit them to practice in general dentistry – to treat patients with oral cavities and tooth illnesses, as well as to be able to present practical and educational events on the prevention of dental illness. Studies are organised in small groups of 8 people and an individual attention is given to each student’s progress. Clinical case analysis, evidence based dentistry and scientific projects are important part of the programme as well. The clinical studies are supported by use of top quality dental equipment, filling materials and interactive technologies. The Institute of Dentistry is internationally acclaimed state-of-the-art practical dentistry centre. The programme consists of basic subjects such as Human Anatomy, Histology and Biology (year 1), mix of general, pre-clinical, clinical subjects – Microbiology, Cardiology, Clinical Pathological Physiology (year 2) and clinical subjects – Orthodontics (years 3 to 5). The graduates of this programme have wide employment opportunities in Latvia and abroad. The diploma of RSU is recognised within the European Union.

### The description of study programme:

The goal of the programme is to prepare academically educated and professionally qualified doctors, and to provide society with highly qualified and modern medical care. Studies are organised in lectures, seminars, practical work, laboratory work, clinical practice, discussion groups and analysis of situations.

Main courses offered include: Anatomy, Histology, Embryology, Physiology, Biochemistry, Pathology, Radiology, Pharmacology, Internal Medicine.

Students in this programme acquire the knowledge and skills in clinical medicine. As an outcome students are able to analyse processes related to human health and use advanced methods of diagnosis and treatment and modern medical technologies to improve human health.

The acquisition of practical skills is facilitated and ensured by using real-life simulations at the RSU Medical Education Technology Centre.

The graduates of this programme are usually employed in health care institutions and education and research establishments.

**The description of study programme:**

Main objectives of the study programme are to provide physiotherapeutic studies corresponding to the professional standards of physiotherapy, to prepare students for creative research and educational work by implementing the acquisition of extended knowledge in physiotherapy and to promote graduates’ competitiveness in the socioeconomic conditions of the local and international labour markets. Studies are organised in lectures, seminars, discussions, group and individual projects and presentations. Main courses offered include basic subjects like Anatomy and Biology, clinical subjects – Pathological Physiology, Internal Diseases and specialised subjects – Physiotherapy, Rehabilitation and many more. During the final year students undertake placements and carry out scientific work (Bachelor theses).

Students in this programme acquire knowledge of health improvement and prophylactic measures as well as the skills to improve and maintain the functional abilities of patients by using different methods of physiotherapy. Graduates of this programme are usually employed in rehabilitation institutions, social care centres, schools, sports teams or similar establishments.

The Bachelor study programme provides fundamental theoretical and practical knowledge in the field of aviation through the use of laboratories, test benches and exercise equipment. The acquired knowledge and practical skills conform to the demands of European aviation companies. The main fields of research at AERTI are technical diagnostics and non-destructive methods of control, research on composite materials used for aviation construction, Unmanned Aerial Systems (UAS), engineering and design (i.e. CAD/CAE, 3D printing technologies, etc.), green energy (wind rotors, e-cars, etc).

Aircraft technical maintenance and operation engineer mechanics or avionics engineers perform technical operations, maintenance and repairs in a variety of organisations that use aircraft. AERTI graduates hold leading positions in airlines, aviation companies and air transport establishments all over the world. Some even are famous aviators and astronauts. The high quality education allows graduates to successfully work in the aircraft industry, aviation research organisations and space centers of leading superpowers.

### The description of study programme:

The study programme is designed to provide a thorough foundation in the various fields of chemistry such as organic, inorganic, physical and analytical. It covers the related sciences and focuses on the practical usage of the acquired theoretical knowledge. The programme is for students planning careers in chemical industries, which includes manufacturing and process, product or environmental quality control companies. Relevant careers are found in governmental laboratories and in fields connected with sustainable resources. The programme is a prerequisite for students who are planning to undertake Master studies in chemistry, environmental science or other related science. Graduates have job opportunities in the field of chemistry or in companies within related fields as well as options to continue studies in postgraduate programmes. The possible careers include laboratory work with chemical processes in research, testing and quality control laboratories undertaking development of new technologies, materials and products or their quality control. Graduates can work as a self-employed person or as a technician or an assistant in scientific institutions.

### The description of study programme:

The aim of the study programme is to prepare successful professionals by providing intellectual, practical and personal skills for any number of career paths in the civil engineering industry including structural design, project management and sustainable design and construction. Lectures are given by academic staff with high qualifications who are involved in research work and many international projects. The programme consists of core studies dealing with fundamental engineering principles, supported by a broader educational base of Mathematics, Physics, etc. This is strengthened by an introduction to the use of industry-standard software, and all of the above is taught in accordance with the new structural Eurocodes. Graduates become licensed professional engineers and work in positions in a wide range of professional settings including construction companies, consulting firms, industry or government establishments. The programme prepares students to enrol to and successfully complete Master studies in professional engineering degree programmes.

#### The description of study programme:

The Bachelor study programme provides students with a thorough knowledge of the computing industry. The objective of the course is to prepare professionals starting independent work in the field of informatics by providing them with knowledge in software engineering, computer systems development, systems analysis, database technologies and artificial intelligence. In addition they are trained to use systems thinking and systems approach to fulfil different roles including participating in software development projects. Graduates demonstrate professional knowledge, ethics and skills complying with IT industry standards. Students of the study programme annually receive local and international awards for the best research works, scientific papers and theses. Graduates can work in information technology companies (or in IT departments of other companies) within software development projects playing a variety of roles such as system analysts, software architects, programmers, testers, web developers, production support specialists, database administrators and technical writers. Graduates of this study programme can continue studies in Master level programmes.

Computerized Control of Electrical Technologies (Bachelor)

Subject area: Engineering and Technologies

Awarded degree and/or qualification: Bachelor of Engineering Sciences in Electrical Engineering

Duration/Study form: 3 years/Full time

The language of study programme: English

Fees: EUR 1800 per year (citizens of EU, EEA, CIS, Georgia, Turkmenistan, Ukraine); EUR 2120 per year (citizens of other countries)

Link to the study programme: http://www.rtuasd.lv/resource/show/215

The description of study programme: The programme is designed to prepare students to work in, or control engineering teams. Our Electronics and electrical engineering technology programs prepare students with the underlying principles of how circuits work, learning how to develop and test system prototypes, the calibration of instruments or the preparation of systems reports. It provides a blend of knowledge from electrical technologies and computer sciences focusing on state-of-the-art electrical technological equipment, including how to apply the latest automation devices in traditional electro-technical systems and microprocessor control systems. The aim of the programme is to provide an academic education in Computerised Control of Electrical Technologies and prepare students for the workplace or for further studies at the Masters level.

Upon completion students will have a fundamental working knowledge of the theoretical and practical issues related to the implementation of the various electrical technologies in differing economic sectors, automation principles and expected implementation. The necessary expertise will be obtained to begin a practical and diverse career as technicians or controllers.

## Subject area:
Engineering and Technologies

### Awarded degree and/or qualification:
Bachelor of Engineering Sciences in Mechanical Engineering

### Duration/Study form:
3 years/Full time

### The language of study programme:
English

### Fees:
EUR 1800 per year (citizens of EU, EEA, CIS, Georgia, Turkmenistan, Ukraine); EUR 2120 per year (citizens of other countries)

### Link to the study programme:

### The description of study programme:
The study programme places a strong emphasis on analytical engineering science and technical fundamentals, which require the ability to apply core mathematical skills. Growing demand for modern and complex industrial machinery, machine tools, robotics and computer-controlled processes require highly qualified technologists for their development, manufacture, use and support. Acquired skills of theoretical calculations and computer applications help to solve problems in mechanics and lab experiments creating a solid basis for a further career in industry or further studies in a master programme. Graduates can pursue a mechanical engineer career in both local and international projects as well as in various companies — automobile, shipyards, railway transport, etc., where there is a requirement for expertise in combustion, noise and vibration process control, robotics, quality management, biological engineering, space research, liquid mechanics, water supply, planning machine and mechanism maintenance, consumer goods design, pollution control and mechanical synthesis of new materials.

The description of study programme:
The Bachelor study programme focuses on the rapidly changing global economic environment and the opportunities for entrepreneurial activity. By combining theory, practice and continuous assessments students discover how to succeed, either as a professional decision-maker or as an entrepreneur in the business world. Students learn the entire process of starting a business including finding a profitable idea, gathering funding and resources, developing a plan, starting the business and managing the business thereafter. The course provides students with the means to identify socially economic process difficulties and the knowledge to create solutions through stimulating their analytical abilities and scientific research skills.

Graduates are qualified to work as managers and economists in state offices and institutions, banks and private businesses. Graduates will also be able to start their own business.

**The description of study programme:**

Geomatics study programme is designed for those who enjoy the application of maths and computers but dislike the idea of being chained to a desk. This is an exciting field that fuses land surveying techniques with computer technology. Geomatics professionals use an integrated approach to measuring, analysing and managing spatial data, employing high-tech equipment like Geographic Information Systems (GIS), Global Positioning Systems (GPS), digital photogrammetry, digital total stations, satellite and terrestrial remote sensing to create a detailed and accessible picture of the Earth’s natural and manmade features. Lectures focus on practical activities and include both academic and professional subjects. Studies are very hands-on and lectures are given by practicing Professionals. Students are at the center of the action as both Latvian Association of Surveyors and Certification Centre are located at the faculty building.

The programme provides graduates with the knowledge and skills to works as geodesists, surveyors or cartographers not only in companies working in these fields but in those focused on real estate and cadastre.

**The description of study programme:**

The Bachelor study programme is designed to meet the future need for medical care to be provided through an efficient health care system, which makes use of state-of-the-art technical equipment in prevention, diagnosis, and therapy. In comparison to other international examples, the RTU programme is interdisciplinary covering both medical engineering and medical physics disciplines.

Medical Engineering and Physics is a diverse and exciting programme that covers the research and analysis of many of the latest advances in medicine.

A Medical Physics Technology Engineer works at medical institutions such as hospitals, outpatient clinics, health centres rehabilitation institutions, specialised centres, laboratories as well as medical equipment distributors.

Graduates work with the design, development, testing, control and maintenance of medical equipment, devices and instruments. In addition, they work at service, certification, monitoring, production, design and research companies.

#### The description of study programme:

The Bachelor Study Programme “Technical Translation” educates and trains translators in such fields as engineering economics, management, civil engineering, architecture, information technologies and telecommunications. It differs from similar study programmes in the Humanities as it has an additional emphasis on mastering scientific and technical terminology, researching latest trends in applied linguistics and acquiring profound knowledge in the field of translatology. The study programme is unique as not only linguists, but specialists in the corresponding fields of science and technology, business and law participate in the implementation of the study programme. Knowledge of at least two languages from English, Russian, and German is required. The value of this programme is defined by a great demand for specialists with the specified profile in the European labour market. Translators are needed in translation bureaus, enterprises (joint ventures in particular), international projects, state and municipal establishments and other institutions where the knowledge of foreign languages, basics of engineering, creative approach to work, presentation and translation skills are necessary.

**The description of study programme:**

The study programme “Telecommunications” has been designed to prepare students who intend to venture into one of the most dynamical and radically changing fields, that of telecommunication, information communication technology, mobile computing, computer networking and security.

Providing students with basic and advanced knowledge in computer architecture, computer networking, internet technologies, telecommunication engineering, protocols and security paradigms is of paramount importance and therefore, along with theoretical studies there is included computer lab work and hands-on learning.

The Bachelor study programme provides a blend of knowledge from electrical engineering and computer science focusing on communications networks and systems, encoding theory, information/optical processing and transmission. The aim of the programme is to provide an academic education in Engineering Telecommunications and prepare students for further studies at the Masters level.

The programme prepares professional transportation engineers with comprehensive theoretical knowledge and practical skills as well as competence in all fields required by future employers.

A major and long-term investment of any society is the construction of transport infrastructure. To ensure the further development of required transport infrastructure highly skilled professionals are needed who can design roads, bridges and other transport related facilities. In addition, there is also a need for professionals to manage and maintain these facilities during their service life, as well as conduct scientific research and to develop new construction engineering theories and methods. A Transportation Engineer is a qualified specialist who can design roads, bridges and other transportation infrastructure, manage construction projects (construction works and staff), provide service and maintenance, calculate and estimate construction cost, prepare the necessary documentation. In addition, they can perform works in accordance with construction design, building standards and norms, ensure quality and safety standards, perform scientific research work and develop new construction theories and methods.

**Aviation Transport (Master)**

**Subject area:** Engineering and Technologies

**Awarded degree and/or qualification:**
- Professional Master’s Degree in Aviation Transport or
- Professional Master’s Degree in Aviation Transport and Qualification of Transport Aircraft Technical Maintenance 1) Avionics Engineer/ 2) Mechanical Engineer

**Duration/Study form:** 2 years/Full time or 3 years/Full time (depending on previous degree)

**The language of study programme:** English

**Fees:** EUR 2480 per year

**Link to the study programme:** [http://fsd.rtu.lv/resource/show/228](http://fsd.rtu.lv/resource/show/228)

**The description of study programme:**
The aim of the study programme is to equip experienced aviation industry personnel with the necessary knowledge of the complex disciplines and an understanding of the technical, operational and maintenance pressures impacting flight operations. The programme prepares students for work in the construction and maintenance of aviation transportation infrastructure, operation and maintenance service for aircraft mechanical systems and technical systems of avionics, system operation analysis and design.

Aviation specialists can work in a variety of positions including aircraft operation and maintenance engineers in airports, engineers-designers in aircraft and aviation system production companies, engineers in aviation maintenance companies, researchers in research centres and airfreight logistics specialists in logistic companies. In addition specialists can perform analytical and managerial work as well as scientific research work.

### The description of study programme:

The Master study programme will provide students with the practical applied knowledge and additional values needed to succeed in this area. The aim of course is to educate future company financial managers and finance investment administration specialists in order to solve financial problems and make decisions in today’s ever-changing business environment. Two specialities – finance management and finance economics – are available for students studying in Business Finances.

Graduates of the study programme Business Finance have a variety of job opportunities in government, financial services, public accounting, or business advisory and private companies. They are able to continue their career as specialists in business finance management, research, work in finance resource management in different companies and finance investment management in the field of financial services. Moreover, a specialist in business finances can work for a public accounting or consulting company, a governmental agency or a business entity.
### Subject area:
Information Technologies and Computer Sciences

### Awarded degree and/or qualification:
Master of Engineering Sciences in Business Informatics

### Duration/Study form:
2 years/Full time

---

### The description of study programme:
The aim of this study programme is to enable professionals to master systems thinking and engineering sciences and to be able to use, choose, develop and acquire information and communication technology (ICT) solutions that enable enterprise development. Moreover, it is aimed at ensuring that graduates of the programme can design intra- and inter-organisational information systems and are capable of participating in corresponding interdisciplinary and international projects. The study programme is designed according to the best European practice in business informatics programmes, global and regional industry trends.

Graduates of the study programme “Business Informatics” work for IT companies, public and private institutions using advanced ICT solutions, and consulting firms. They are qualified to fulfil a range of positions including business architect, information architect, information systems architect, information engineer information systems engineer, systems analyst and designer, business process analyst, engineer, and manager, business analyst, risk manager, requirements engineer, chief information officer, IS manager, business and IT consultant.

**The description of study programme:**

The Master study programme is a combination of engineering, economics, management and communication. It is designed for professionals in the field of business administration, real estate management and civil engineering who wish to manage international projects for building construction and real estate in the future. The programme enables students to adapt to foreign environments and to become acquainted with different mentalities and habits. The programme strives to educate entrepreneurs and managers in the latest developments in the field of building entrepreneurship and real estate development. The programme development is supported by the International Real Estate Federation FIABCI, local real estate and building industry associations and it is developed in line with the standards of the International Project Management Association (IPMA). Graduates can work in real estate companies, house management companies, civil construction and building projects, governmental institutions and local governments. They are qualified to fulfil various positions including manager, project manager and construction manager.

The description of study programme:

The Master study programme provides students the skills to shape and maintain the built environment around us. The aim of the programme is to provide postgraduate education for students wishing to improve their knowledge base in civil engineering and to gain additional professional skills. This programme is suitable for students planning to pursue professional career in consulting, industry and government service across the broad spectrum of the professional disciplines. The master programme gives graduates opportunity to become licensed professional engineers, to work in positions in a wide range of settings including consulting firms, industry or government or start their own companies and they are equipped to continue studies at PhD level and/or teach at higher education institutions.

**The description of study programme:**
The Master study programme is designed for graduates who want to deepen their knowledge and skills in computer science, software engineering, theory of computer systems development, database technologies, programming languages, software development environments and artificial intelligence. In addition, it develops the ability to participate in software development projects, fulfil different (including manager) roles and comply with IT industry standards and professional ethics.

Graduates have opportunities to work in information technology companies (or in IT departments of other companies) where they can participate in software development projects and play a variety of roles such as system analysts, architects and designers, programmers, test engineers, technical writers, team managers and project leaders. Graduates of this study programme can continue studies at Doctoral study level and can start working at the university and scientific research organisations.

The description of study programme:

This Masters’ study programme provides a blend of knowledge from electrical and computer science, building upon the solid foundation achieved during Bachelor studies. A growth in the number of computer systems in the manufacturing industry sector worldwide requires that a new generation of highly qualified professionals are required to exploit emerging computer-based technologies and implement these in order to maximise the benefits from power and electrical engineering. The RTU is providing students with the professional skills needed to enter a successful career in the field of Computerised control.

There is little value in providing a list of prospective career opportunities due to the unavoidable truth that behind every technological device in use today, there is a manufacturing process, control processes, an operational process and maintenance upgrade process which requires highly qualified personnel that are able to control, maintain and ensure uninterrupted service.

**The description of study programme:**

The Master study is designed to provide knowledge and skills for applying a scientific foundation to solve engineering problems in various engineering industries. Studies focus on specialised courses in Applied Mechanics, Mechanical Engineering and Processing Techniques with a particular interest in the development of new composite materials, analysis of large dynamic systems, design of medical equipment and robotic devices.

Graduates can pursue a mechanical engineer career in both local and international projects as well as in various companies – automobile, shipyards, railway transport, etc., where there is a requirement for expertise in combustion, noise and vibration process control, robotics, quality management, biological engineering, space research, liquid mechanics, water supply, planning machine and mechanism maintenance, consumer goods design, pollution control and mechanical synthesis of new materials.

In addition, designers and mechanical engineers can work in companies involved in packaging industry, automation of industrial processes.

#### The description of study programme:

The Master study programme is designed specifically to address the necessity for a graduate course that deepens student’s theoretical and practical knowledge of entrepreneurial and managerial processes. The programme is based on fundamentals of entrepreneurship activities – competitive product or service production and economically profitable distribution. The studies provide a strong theoretical and practical base and four specialised courses in entrepreneurship management, entrepreneurship economics, project management, and financial risk management.

The acquired knowledge provides the necessary expertise to analyse and evaluate economic processes in local, international and state institutions as well as the private sector. Graduates are able to carry out scientific research and pedagogical work. Students graduating from this programme will be able to pursue entrepreneurial opportunities in the industry of their choice after gaining relevant experience. Students with this degree are suited for careers in business administration/management/operations, financial management services and marketing at local or international, state and private sector institutions.

#### The description of study programme:

The Master study programme provides students with the knowledge and skills necessary to contribute to the conservation and sustainable use of natural resources. The programme focuses on technological solutions for environmental protection associated with the use of renewable energy sources, increase of energy efficiency, implementation of cleaner technologies and principles for sustainable development. The aim is to train highly qualified specialists with comprehensive practical and theoretical knowledge of latest developments in environmental technologies. Students are introduced to systems’ thinking to understand the on-going climate change and find the optimal solutions for environmental problem solving. During the study process students may use the faculty laboratories e.g., Laboratory of Environmental Monitoring, Laboratory of Climate.

Graduates have many career opportunities as leading specialists in environmental and power industries. Our graduates work as project managers in engineering companies, environmental specialists in manufacturing enterprises and governmental institutions and researchers in scientific institutions.

The description of study programme:

The Master study programme offered by the Institute of Applied Linguistics is aimed at professionals, academics and researchers working in the field of Technical Translation. The programme is designed to advance theoretical knowledge of both native and foreign languages and the translation process. The acquired knowledge is used in practise during fieldwork. The programme provides a strong foundation for further scientific research and Doctoral Studies. The academic personnel consist of both highly trained practicing professionals and recognised scientists, who published a variety of scientific articles and books.

The value of this programme is defined by a great demand for specialists with the specified profile on the European labour market. Translators are needed in translation bureaus, enterprises (joint ventures, foreign projects and framework programmes), state and municipal establishments and other institutions where the knowledge of foreign languages, fundamentals of engineering, creative approach to work, presentation and translation skills are necessary.

The description of study programme:
The RTU provides students with the professional skills needed to enter a successful career in the field of telecommunications as a highly trained technology specialist able to delve within the realms of the research and development professional. The task of Internet Technology and Communications specialists is that of understanding and administrating exceedingly complex communication systems in order to ensure elastic and sustainable operation. The academic programme focuses both on theory and practice and includes innovative solutions, the know-how of new technology development and industry trends.

This Masters study programme provides a blend of knowledge from electrical engineering and computer science, building upon the solid foundation achieved during Bachelor studies. The aim of the programme is to provide to the workplace an engineer of the highest standard or alternatively the skills required to continue with further studies at the Doctoral level.

The programme corresponds to EU standards and professional requirements set for MDs. The obtained degree is in line with European labour market requirements (part of European comparative degree system) and allows free movement within Europe. During the studies students learn the science and methods of medicine based on human morphology (structure), functions (physiology), psychology, basic clinical practice (anamnesis, overall objective examination and interpretation of results, manipulation competence), obtains knowledge on health promotion and disease prevention in the context of family and society. After successful completion of the programme graduates may enter residency and Doctoral studies. The programme graduates work in the field of health care, medical firms, governmental institutions. Graduates may also work in hospitals or health centre under the supervision of a certified Doctor.

**The description of study programme:**

The study programme is aimed at academic studies in Chemistry and preparation of specialists in Chemistry. In 2012 the programme was awarded the label of “Chemistry Eurobachelor” by the Labelling Committee of the European Chemistry Thematic Network Association (ECTNA, Certificate Nr. EB1104, 18.04.2012.). The courses cover the main aspects of the chemistry science: inorganic, organic, analytic, physical, and biological chemistry, and through elective courses and research in some specialisation is available in organic synthesis, in food chemistry, or in practical analytic chemistry. The students also acquire the necessary knowledge and practical skills of the work in chemistry labs, and the ability to carry out research in one of the branches of chemistry demonstrating their results in the bachelor thesis. After graduation, the students can continue studies for the Master’s degree. Graduates can integrate in the labour market as entry-level chemists.

**The description of study programme:**
The programme combines language studies with business studies and aims at preparing students for international careers in enterprises and institutions operating in the modern economic and political environment. The language studies in the programme offer a choice between three language modules: English-French, English-Spanish and English-German. All three modules comprise studying Business English, Financial English, English for Law, as well as studying general and business aspects of the other modern language. The programme provides cultural studies through such courses as Intercultural Communication, Intercultural Business Relations, business studies through the basic management studies as well as EU and international market specific study courses. Students will be able to continue education in Master degree programme and second level professional study programme. Advanced competence in foreign languages along with a thorough grounding in business proves attractive to domestic and international employers.

</tr>
</tbody>
</table>

### The description of study programme:

This programme is based on studies of natural sciences, biology, medicine and basic principles of primary eye care service. Bachelor programme is the first step in professional optometrist education scheme in Latvia. The programme offers extensive profile studies of natural sciences including organic chemistry, biology, calculus, physics for natural sciences, optics, basics of human anatomy, general physiology, ophthalmic optics, microbiology, biochemistry, anatomy and physiology of the eye, physiology of vision, optometric instruments, refractive defects, binocular vision and others.

The thesis topic should be chosen carefully under the supervisor’s assistance for further research. The graduates of the programme can continue their education in Master’s degree programmes.

This programme prepares competitive graduates with profound knowledge and skills in optometry for both Latvian and European labour markets.

#### The description of study programme:

This programme provides an opportunity to obtain an interdisciplinary Master’s degree in Baltic Sea region issues. It offers education in humanities and several social and environmental disciplines, focusing on the Baltic Sea region countries. The programme is set up in cooperation with partner universities: University of Turku, University of Tartu, Vytautas Magnus University and this partnership enables student mobility within the programme. The following modules are offered: Baltic States and Europe, Policy and Human Rights, Society and Environment, Art and Literature Studies, Cultural History and Education. Besides, students are entitled to choose one of the following languages: Latvian, Swedish, Finnish, Estonian, or Lithuanian. The graduates obtain qualification to continue their academic research in PhD studies. The graduates of the programme will have a possibility to work in various state, non-governmental and private institutions, diplomatic structures, representative offices at the international organisations, e.g. the United Nations, UNESCO, NATO, European Council, etc.

**The description of study programme:**  
The programme offers possibilities to widen and deepen knowledge in philosophy of education, sociology, psychology, comparative research, research methodology, adult education, multicultural education, in human behaviour and education. According to the student’s choice it is possible to carry out research in educational leadership, changes in education, development of educational environment, socialization processes, social inclusion, multicultural education, adult education. It gives students possibility to develop individual skills in research, to summarize, to analyse, to evaluate research results in different fields related to education and for doctoral studies on education sciences.  
Part time students travel twice a study year to University of Latvia to have introduction in the courses, to receive tasks for completion of the courses, to discuss the completed tasks. The communication with teaching staff is organised via e mailing and Skype.  
The MA degree enables the graduates to have a number of job opportunities at institutions of secondary and higher education, public administration agencies, non-governmental organisations, the EU structures and other related fields.

**The description of study programme:**

The Joint Master’s Programme was created in 2007 by four universities – National University of Distance Education, Charles University, University of Latvia and Ludwigsburg University of Education and is meant for those who work or will work in education or other areas involving people with diverse needs. The studies enable the students to manage their own time, to study in a new interactive way; to learn about current issues in pedagogy and education; to combine studies with work; to use ICT in the learning process; taking advantage of online study materials, for example, to study real-world applications; to improve their daily practice and expand their knowledge and skills; to study in the international learning environment – the e-environment, while also communicating with others via common forums and chat rooms (collaborative learning), and to share the experience of diverse pedagogic approaches. Graduates are able to work on pedagogical solutions focusing on people with disabilities, to adapt their own workplace to diverse needs, to promote various projects and actively apply the knowledge, skills, and competence in carrying out their ideas, programmes, and plans in practice.

English Philology (Master)

Subject area: Language and Culture Studies

Awarded degree and/or qualification: Master of Arts in Philology

Duration/Study form: 2 years/Full time

The language of study programme: English

Fees: EUR 1707 per year (EU, EEA citizens)
      EUR 3699 per year (citizens of other countries)

Link to the study programme: http://www.lu.lv/eng/istudents/degree/study/master-englishphilology/

The description of study programme: The programme develops competences of conducting independent research in the selected sub-branch of philology on the basis of the acquired knowledge and skills. The programme objectives are to ensure that students broaden and systematize the acquired knowledge about the content, methodology, major theories and current research in literature, general and applied linguistics, develop awareness of implementing theories in practice, acquire research work skills, foster subject-specific competences and apply them in research and professional practice. Students develop the ability to formulate, do a summative analysis of the developmental tendencies in linguistics, literary studies and language acquisition, and the ability to state the research problems and propose approaches to solve problems. Upon successful completion of the programme MA degree holders are able to conduct independent research on issues related to general linguistics, applied linguistics and literature, to continue studies at PhD programme as well as to have a number of job opportunities at institutions of secondary and higher education, public administration agencies, non-governmental organisations and other institutions.

#### The description of study programme:

The aim of this Study Programme is to ensure critically reflective understanding of education and pedagogical activity to facilitate personal wellbeing and coherent development of society as well as competence of implementing it in professional practice. Students develop professional skills in connection to labour market and global social need, and apply it in professional practice. Programme promotes integrated studies and interdisciplinary approach; integration of didactics and research improving the research skills and managing learners’ research. It is based on students’ previous education and experience at educational institution and characteristics of the changing target audience. The programme gives the chance to the teachers who have already higher professional education to obtain professional Master’s degree. After successful graduation it is possible to work at secondary and higher education institutions, research centres, non-governmental organisations, government and private institutions, the EU structures and have an opportunity to continue studies in the Doctoral programmes.

</tr>
</tbody>
</table>

The description of study programme:

This study programme leads to qualification in navigation at management level on board ships of 500 GT or more in compliance with STCW – 78/95 and higher level professional education (BSc equivalent) as stipulated by the Law on Institutions of Higher Education of the Republic of Latvia.

Studies are organised as lectures, seminars and project work.

Seagoing practice for duration of 12 months is included in the programme.

The programme enables graduates to qualify as Ship Deck Officers at a management level without any restrictions of tonnage and sailing area. In their future career development they are very likely to qualify for a Marine Superintendent’s position in shipping or ship management companies.

#### The description of study programme:

The interdisciplinary programme “Law and Business” combines law and business courses to provide an understanding of the relations between law and business in an international context. The programme covers issues related to International, Comparative and EU Law, as well as issues related to Economics, Finance, Marketing and Management. RGSL aims to train students for positions in business and international legal practice – to work either in a managerial environment, with a clear understanding of legal issues, or in legal practice with a clear understanding of business transactions. Teaching methods are case-based and focused on practical applications while also providing students with a clear understand of the underlying theoretical aspects of each field of study. The school’s interdisciplinary approach combines theory and practice, thus providing students with a solid foundation for professional careers in the modern world.

Graduates of the programme can work in law firms, banks and international companies, since after graduating students have wide knowledge of European and international issues and have fluent business English.

### The description of study programme:

The programme covers the fundamental pillars of legal science and theory, offering a selection of courses related to private international law, public international law, human rights, and European Union law.

Each course track comprises a period of theoretical study and class work, followed by a master’s thesis. The 1-year master’s programme consists of 20 weeks of theoretical study with an interaction of law and other disciplines emphasised within each course track and 20 weeks devoted to thesis writing.

This programme is meant for students who are interested in a professional career at the EU, international organisations, private law firms, public authorities or academia.

RGSL networks and strong partnership with leading institutions and experts in Latvia and throughout Europe form a sound basis for our alumni and scholars to compete in the global economy.

| **Fees:** | Full tuition fee EUR 6 000  
Candidates from the Baltic countries EUR 3 500  
(tuition fee partly covered by SSE Riga foundation; Alumni Scholarships available for Year 1 students)  
Candidates from Belarus, Moldova, Georgia and Ukraine are entitled for Swedish Government scholarships to cover tuition fee, accommodation and living expenses |

The study programme provides students with an opportunity to acquire broad knowledge in economics and business. The study course range is interesting for mathematically-inclined students, students interested in finance or accountancy, or students with entrepreneurial spirit. Apart from academic knowledge students obtain the skills of working in project teams, doing applied research after visiting companies for gaining practical insights, acquiring negotiation and public speaking skills, and developing interpersonal communication skills as well.  

The programme is organised on a modular basis – only 1-2 core courses are delivered at the same time, allowing students to focus on one subject at a time.  

It also offers an international study environment. Students represent about ten countries which include the Baltic States, Moldova, Ukraine, Belarus, and others.  

Upon graduation, SSE Riga students build successful careers in a wide range of sectors, including finance, banking, real estate, auditing and consulting, IT and telecommunications, advertising and media, government, manufacturing and construction, and education and research.

Business Administration (Master)

The Stockholm School of Economics in Riga

Subject area: Business, Administration and Economics

Awarded degree and/or qualification: Master’s Degree in Business Administration

Duration/Study form: 2 years/Full time

The language of study programme: English

Fees: EUR 22 000

Link to the study programme: http://www.sseriga.edu/en/education/executive-mba/

The description of study programme:

The study programme combines intellectual rigor with serious business training. The programme is organised in a format allowing business executives to continue their studies while working. This two-year module-based programme broadens students’ knowledge in business administration, promotes a professional career and provides global cooperation opportunities within the SSE Alumni network. The classes are comprised of 25-30 students with various academic and professional backgrounds both contributing to and getting benefits from the programme through its unique experience of group synergy.

The programme includes two international modules. One module is organised at Stockholm School of Economics in Sweden. The second international module takes place at Kellogg/Hong Kong UST Business School, China.

The international dimension in the programme is enforced by also having an international team of lecturers. The programme involves professors from the UK, the USA, Sweden, Denmark, Ireland, Croatia, Australia, and Canada, as well as from the Baltic countries.

**The description of study programme:**

The goal of the study programme is to ensure that graduates are qualified for work in state and municipal institutions, mass media and non-governmental organisations. Studies are organised in the form of lectures, seminars, group work, simulation games and practical projects. The labour market demands experts with interdisciplinary knowledge, thus the programme focuses on integrating study courses with interrelated social, political, economic and administrative aspects. Four main political science subfields are included: political theory, comparative politology, international relations and public administration. Main courses offered include Political Economy, Policy Analysis, Social Policy, Political Economy of Development, EU Politics, Political Theory, International Relations, Political Processes in Latvia, Public Administration. Skills and competences acquired in the study programme include profound knowledge of political processes in Latvia and the world, skills of political analysis and research, critical, analytical and conceptual thinking. Graduates of this study programme have successful careers in governmental, non-governmental and international organisations.

The description of study programme:

The aim of the study programme is to enable students to work as public relations managers at companies, governmental institutions, municipalities or non-governmental organisations.

By studying at this study programme students can choose to be communication manager, and they can use their acquired experience in everyday life, implement it in creative ideas.

Students of this study programme can also work as a press secretary, since they obtain knowledge in cooperation with media and image-making, and the capability to convince the client that one’s offer is exactly what is needed.

After graduating the programme graduates can organise various creative projects such as fashion shows, concerts, conferences and movie editing.

Public Relations programme has been recognised as excellent by experts and employers across Latvia and abroad. University has different partners, including such globally recognised authorities in the area of public relations as Dennis Wilcox from the US and Anne Gregory from the UK.

The professional bachelor’s study programme “Tourism and Hospitality Management” offers education on the European experience and provides an in-depth insight of the challenges faced by European Eastern neighbours in tourism and hospitality sector. Knowledge of applicable business practices linked with industry expertise will be acquired over a four year study period. Programme will introduce student with the basic work principles of the world’s fastest growing industry – tourism. Students will become aware of the versatility and comprehensive nature of tourism industry and acquire the principles of catering services. The graduates of this programme are usually qualified to manage lodgings for the night; work for a catering company or tourism agency; become an expert of hospitality services in hotel or manager of leisure and entertainment company; work as travel consultant or organiser of tourism agency. Internships are offered in Latvian or foreign tourism and hospitality companies in all study years.

The description of study programme:
The acquired knowledge helps students to become managers of their own business or top-level managers at other companies, well-versed in the most recent achievements and trends in business administration. Students wishing to investigate search for regularities and make forecasts whether the particular activity or project at the company must be executed, are able to work as analysts.

Students acquire the current topical trends in the global market for better comprehension of future development directions. This skill is of a great importance for a business development planner.

Main study courses include such topics as psychology of organisations, marketing management, innovations, sustainable development, management of changes and human resources management.

Acquired knowledge will help the graduates to become a manager of your business or highest level manager in another company which is aware of latest achievements and trends in business management.
